

[例題 1]

In recent years, universities have increasingly emphasized critical thinking skills. This shift reflects the growing recognition that memorizing information is no longer sufficient in a rapidly changing society. Employers today seek graduates who can analyze problems and propose creative solutions. For this reason, many institutions are redesigning their curricula to include more discussion-based and project-based courses.

[例題 2]

Many students believe that multitasking improves efficiency. However, recent research suggests the opposite. Studies show that switching between tasks reduces concentration and increases errors. As a result, productivity often declines when students attempt to do several things at once.
