

## 1. Inspiration

Influence 1: Minecraft. We love its freedom to build and destroy a voxel world, procedural caves, and crafting system. We want to combine its creativity with our game.

Influence 2: Stardew Valley. We enjoy its cozy atmosphere, farming, memorable villagers, festivals, and relationship system. We want to bring the same warm social experience.

## 2. What makes your game different?

Unlike most life simulators where the town already exists, in Voxel Hearth the town is completely destroyed. Players rebuild it block by block. Every NPC reacts to the design of their home. A baker prefers a bright wooden house with a stone oven, while a poor design can make them unhappy and reduce their productivity.

## 3. Core Idea

You arrive in a ruined valley and rebuild it by collecting resources, farming, and constructing homes. Build houses, attract new villagers, improve relationships, and unlock rare materials by exploring deep caves.

## 4. Setting

The game takes place in a beautiful mountain valley with forests, rivers, and mysterious caves. It features a soft voxel art style with pastel colors and a relaxing cozy atmosphere focused on creativity.

## 5. Player Role

The player is the Valley Architect and Guardian. They explore in first- or third-person view and rebuild the world through creativity and construction.

## 6. Main Goal

Restore the legendary town, attract 20 unique villagers, build each of them an ideal home, and uncover the mystery of why the valley was abandoned.

## 7. Mood

The game should feel creative, relaxing, and curious. Players express themselves through building, enjoy a peaceful environment, and discover secrets underground.

## 8. Target Audience

The game is designed for casual players, fans of life simulators like Stardew Valley and The Sims, and creative Minecraft players who want richer NPC interactions and story.

## 9. Themes

Restoration, friendship, community, harmony with nature, and environmental renewal.

## 10. Mechanics

Smart Blueprint System: Every new villager provides house requirements, such as minimum size, a fireplace, or a second floor. The game scans the finished building and rates its comfort based on those requests.

## **11. Working Title**

Voxel Hearth

## **12. Genre**

Cozy Voxel Sandbox RPG

## **13. Pitch**

Voxel Hearth combines the creative building of Minecraft with the heartwarming life simulation of Stardew Valley. Rebuild a ruined valley block by block, design unique homes for demanding villagers, grow crops, explore mysterious caves, and create a thriving community. Your architectural choices directly affect every resident, making every town unique.
